📊 Sales Dashboard Project

🔍 Problem Statement

In many organizations, sales data is scattered across multiple sources and formats, making it difficult to extract meaningful insights. Decision-makers often struggle to:

- Identify top-performing product categories
- Track profit trends over time
- Analyze regional sales performance
- Understand customer behavior and contribution
- Monitor monthly and yearly sales growth

Without a centralized and visual system, businesses face delays in decision-making and miss opportunities for growth.

📈 Project Summary

This project presents an **interactive Sales Dashboard** built to analyze and visualize sales performance across different dimensions such as category, time, geography, and customers.

🚀 Key Features

- **Sales by Category Analysis**
  Identify which product categories (Furniture, Office Supplies, Technology) generate the most revenue.
- **Profit Trend Over Time**
  Analyze yearly profit growth to understand business performance trends.
- **Geographical Insights (Sales by State)**
  Visualize sales distribution across different states using map representation.
- **Customer Analysis**
  - Total customer count by year
  - Top 5 customers contributing to maximum profit
- **Monthly Sales Trends**
  Track fluctuations in sales across months to identify peak seasons.
- **Interactive Filters (Slicers)**
  - Category filter
  - Year filter
    Enables dynamic data exploration.

📊 Insights Derived

- Technology category shows strong growth in profit over time

- Certain states contribute significantly higher sales than others
- A small group of customers contributes a large portion of total profit
- Sales show seasonal trends with peaks in specific months
